

## **Marathon to Participate in Open House Introducing a Process Technology Certificate Program at Henry Ford Community College**

Marathon Petroleum Company LLC will be one of the several companies participating in an open house at Henry Ford Community College (HFCC) to introduce the school's new process technology certificate program.

The open house will be held from 3 to 6 p.m. January 15 in the Technology Building on HFCC's main campus, 5101 Evergreen Rd., Dearborn.

HFCC's technical training curriculum will help prepare students for knowledge-based, process-oriented manufacturing careers, such as those needed at petroleum refineries. These technical careers require applied math and science skills, and the work environments are often technologically intense.

For instance, a refinery operator handles a broad range of functions from safely operating units, interpreting lab results and taking action to optimize unit operations and product quality to identifying and communicating changes in equipment performance, work orders or unit conditions.

For more information about HFCC process technology program, call Sharon Connors at 313-845-6415.
